EXPERIENCE THE BEST OF DUCTLESS AND TRADITIONAL HEAT PUMP SYSTEMS

Carrier Ductless Crossover Solutions.
Now with more options and
more versatility.

It's no secret that ductless and traditional HVAC heat pump systems each have their own set of advantages. So why not reap the benefits of both? You can with Carrier Crossover Solutions.

Get the versatility and flexibility you've been looking for by combining your existing traditional indoor HVAC equipment with advanced ductless heat pump technology.

Carrier's Crossover Solutions provide a system that maintains the traditional ducted heating and cooling characteristics while leveraging elements of ductless technology. Our systems are compatible with residential fan coils and furnaces, ensuring a seamless integration with your existing HVAC setup. Our Crossover Solution is an ideal choice when upgrading your home's current HVAC system, constructing a new home or adding on to an existing one.

Say Hello to Even More Performance and Comfort

The Carrier Crossover Solution combines the best of both ductless and traditional HVAC. That means you get the quiet operation, small footprint and enhanced efficiency of ductless and the high performance of traditional units. All in a single crossover system.

Key Features and Benefits

High-Performing

Reduced energy requirements means more efficient, cost-effective heating and cooling.

Dual-Fuel Capability

A dual-fuel heat system combines the installation of an electric heat pump with your furnace, giving you two sources to heat your home. A dual-fuel heating system allows you to heat your home in cold weather with the most energy-efficient option.

Consistent Comfort

Inverter technology ensures precise temperature control with fewer temperature swings.

Small Size

A minimalistic, modern design enables a small outdoor unit footprint.

Whisper Quiet Operation

Minimum noise and disruption means maximum peace and comfort.

Third-Party Thermostat Compatible

Compatibility with a range of thermostats, plus the ability to control an entire system from one interface, increases flexibility and connectivity.
